

GENERAL OVERVIEW

Who we are

Matrix Toll Manufacturing operates blend facilities in Midland, Texas, and Weston, West Virginia, providing chemical manufacturing, logistics, and field support for oil and gas operations.

Core values

Quality, reliability, innovation, and environmental responsibility guide our work, helping us deliver consistent chemical solutions and responsive service across every stage of the operation.

Our expertise

Our expertise includes friction reducers, scale inhibitors, biocides, on-site blending, turnkey services, and coordinated logistics, all designed to improve operational performance, supply reliability,

Delivering efficiency, sustainability,
and high performance in
oilfield operations.

Problems addressed by Matrix Toll:

Operational Inefficiencies

Inefficient fluid flow, equipment corrosion, and bacterial contamination contribute to costly downtime and reduced performance in oilfield operations.

Environmental Impact

Traditional chemical solutions often result in high carbon emissions and environmental degradation, leading to increased regulatory pressure.

High Operational Costs

The oil and gas industry faces escalating costs from frequent equipment maintenance, chemical use, and logistics inefficiencies.

Matrix Toll addresses key industry challenges by improving operational efficiency, reducing environmental impact, and lowering high operational costs in the oil and gas sector.

EMPOWERING OPERATIONS WITH ADVANCED CHEMICAL SOLUTIONS

Friction reducers

Enhance fluid flow for more efficient hydraulic fracturing.

Scale inhibitors

Prevent harmful scale build-up to ensure system efficiency and reduce downtime.

Biocides

Eliminate bacteria and maintain water purity, protecting equipment.

On-site blending

Efficient, in-basin chemical blending for consistent supply and minimized downtime.

MATRIX
TOLL MANUFACTURING LLC

Specialty formulated by
Matrix Toll to deliver best-in-class
performance and economics.

Friction Reducers:

MATRIX A SERIES

- MTM A20™** High Brine Anionic Friction Reducer
- MTM A19™** Mid Brine Anionic Friction Reducer
- MTM A15™** Freshwater Anionic Friction Reducer

MATRIX C SERIES

- MTM C50™** High Brine Cationic Friction Reducer
- MTM C40™** Mid Brine Cationic Friction Reducer
- MTM C30™** Fresh to Low Brine Cationic FR

KEY FEATURES

- Ultra-Fast Hydration
- High Brine Tolerance
- Slickwater and HVFR Capabilities
- Broad-Spectrum Application
- Environmentally Friendly Formula
- Customizable Performance

*Matrix Toll Friction Reducers offer immediate activation, ensuring faster and more efficient hydraulic fracturing with superior fluid movement through enhanced slickwater and HVFR capabilities, even in high-salinity environments. Their broad-spectrum application makes them suitable for a wide range of brine conditions, from freshwater to high TDS. The non-VOC, environmentally friendly formula ensures sustainability without sacrificing performance. Additionally, each product is tailored to specific well conditions, delivering best-in-class efficiency and reduced operational costs.

Matrix Toll Patented FR'S:

DRY ON THE FLY | FRICTION REDUCER™

-  Ultra-fast hydration
-  Direct inject dry FR
-  Lower carbon footprint
-  No VOC
-  Freshwater to extreme brine range
-  Superior performance
-  Lower cost
-  Significant cost savings (\$1.0M/year per crews)
-  Fully self-contained

ENVIROFR 2.25 | FRICTION REDUCER™

-  Lower FR consumption
-  Rapid hydration
-  Reduced horsepower demand
-  Higher rate potential
-  Lower treatment cost
-  Low VOC formulation
-  Cleaner operational profile
-  Consistent job performance
-  Field-ready application
-  Environmentally responsible

Matrix Toll Patented Scale Inhibitors:

Lower FR consumption **by 20%**

Increases FR performance

Less degradation to FR over time

Advances beyond conventional inhibitor performance

Less colloidal damage to the shale formation

Superior performance

Lower vocs for the entire chemical package

Decrease your total cost to treat 1000 gallons by 10% to 30%

Reduce horsepower consumption

Environmentally friendly

- ScaleFrac 880 ensuring equipment longevity, Prevents formation of oilfield scales like calcium carbonate and barium sulfate. Enhances system efficiency and protects critical equipment.

Matrix Toll Biocide Manufacturing:

Broad-spectrum bacterial control

Effective in high-TDS water conditions

Non-oxidizing formula

Low dosage, high efficiency

Environmentally friendly composition

Long-lasting protection against biofilm formation

Compatible with multiple fluid systems

Safe handling and storage

Safeguarding water and equipment

Improves well performance

- Biomax Neutralizes harmful microorganisms in fracturing fluids. Protects equipment from bacterial corrosion and enhances overall well performance.

Matrix Toll delivers complete, field-ready solutions designed to keep your operations moving with precision and reliability.

LOGISTICS AND SUPPLY MANAGEMENT

Matrix Toll coordinates product delivery through efficient routing and dependable scheduling, helping reduce transportation costs while maintaining timely service. Our in-basin blending supports a consistent chemical supply, limits operational downtime, and keeps materials available when and where they are needed.

ON-SITE SERVICE AND SUPPORT

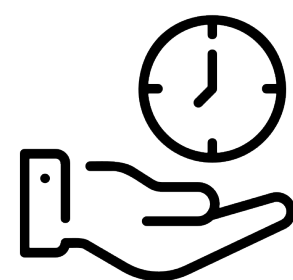

Our field teams manage pump trailers and crews on-site, supporting smooth execution from setup through completion. With hands-on technical support, we assist with product integration, performance monitoring, and daily coordination to help maintain consistent results throughout the operation.

CUSTOM EQUIPMENT SOLUTIONS

Matrix Toll provides field-ready equipment designed to support reliable and efficient operations. Combined with our last-mile logistics, we deliver products and equipment directly to the well pad, helping reduce delays, minimize downtime, and keep field activity moving on schedule.

Why choose Matrix Toll?

LOCAL BLENDING. FASTER RESPONSE

In-basin blending improves supply reliability, shortens lead times, and keeps chemical support close to active operations.

\$1.0m

SAVINGS PER CREW, PER YEAR

Reduce chemical spend and nonproductive time through optimized friction reducer performance.

CHEMISTRY BUILT FOR THE APPLICATION

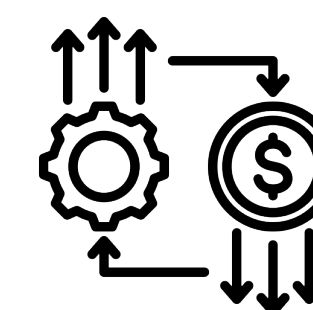

Products are selected and adjusted around water conditions, treatment requirements, and specific operating targets.

30%

UP TO 30% LOWER CHEMICAL COSTS

Improve treatment efficiency through optimized product selection and dosage.

REDUCED DOWNTIME AND MAINTENANCE

Scale inhibitors, biocides, and coordinated field support help protect equipment and maintain consistent operations.

20%

LOWER OPERATING IMPACT

Reduce maintenance requirements, equipment wear, and treatment-related downtime.

Matrix Toll prioritizes eco-friendly solutions across all operations.

Minimizing environmental impact while maintaining high performance is at the core of our approach. Through innovative chemical solutions, we help reduce carbon emissions, support water conservation in manufacturing processes, and remain committed to lowering waste and pollution. Our efforts align with global environmental standards and include active participation in community and environmental initiatives.

Our robust logistics network ensures timely delivery of chemicals to your well site.

From route planning to field coordination, our logistics team keeps chemical deliveries aligned with the pace of the job. We manage transportation, timing, and inventory around field needs, helping reduce downtime while making sure the right products are available when they are needed.

• FACILITIES

MATRIX
TOLL MANUFACTURING LLC

MIDLAND FACILITY

Permian supply built around blending, quality, and field response.

The Midland facility anchors Matrix Toll's Permian operations by bringing custom chemical formulation, toll blending, batch quality verification, packaging, labeling, bulk delivery, and field scheduling together under one coordinated team. Each order is prepared to customer specifications, verified before release, and supported through shipment, pad-site handoff, and field execution across the Permian.

Midland, TX 2208 E County Road 130, Midland, Texas 79706

Delivering hands-on support across every stage of your oilfield operations.

Matrix Toll Manufacturing provides technical consultations, on-site evaluations, and product performance monitoring. Our team of experienced professionals offers hands-on support to ensure seamless product integration into your operations.

Advancing innovation through applied chemistry

Our research and development process turns new chemical concepts into practical, field-ready solutions.

Laboratory testing helps us formulate, refine, and validate products for demanding oil and gas conditions.

Working with customers, we adapt chemistry to improve performance, support efficiency, and reduce environmental impact.

WESTON FACILITY

Northeast blending capacity supported by last-mile logistics and turnkey pad service.

The Weston facility strengthens Matrix Toll's Northeast operations with more than 1.0 million gallons of blend capacity, regional chemical support, last-mile scheduling and delivery, and turnkey coordination from product preparation through pad arrival. By bringing logistics, on-location handoff, and field-team coordination into one workflow, the facility helps operators reduce delays and respond quickly to changing field schedules.
